Secure Techniques for Onsite Previewing

Version 3.0, updated November 2017

This course covers the usage and configuration of two tools (Paladin/Autopsy and osTriage) designed to preview a non-mobile digital device and export files of evidentiary value. DAY ONE is designed to preview a non-mobile digital device and export files of evidentiary value from a device that is powered on. DAY TWO is designed to preview a non-mobile digital device and export files of evidentiary value from a device that is powered off.

Students who bring an external USB hard drive (32GB minimum) will be able to leave with the same setup shown in class. Other topics include a detailed examination of the process of previewing: what previewing is, why and when it should be done, who can conduct a preview, and differences in procedure for starting a preview depending on whether a device is on or off.

- **What is previewing?**
  Learn why you should preview, who can perform a preview, when to conduct a preview, and how to start a preview whether a device is on or off.
- **Paladin/Autopsy.**
  Forensically boot a device, then quickly preview and export digital evidence found on scene.
- **osTriage.**
  Identify when encryption is present, image RAM memory, display browser history, preview and export existing files, and much more.
- **Hands-on experience.**
  Work with Paladin/Autopsy and osTriage, and leave the course with the same setup shown in class.

Suggested materials

Bring an external USB hard drive (32GB minimum) to class.
